## How To Use This Report

This report contains 'percentile scores', 'behavioural interpretation' and 'interview questions' that can be used to explore a candidate's results in more detail:

### Percentile Scores

Percentile scores represent how a candidate's performance on a test (i.e., their score) compares to the performance of other candidates that have also taken the same test (i.e., the comparison group or norm group). Percentile scores range from the 1st to 99th percentile, where 1 is a very low score and 99 is very high.

The overall percentile score is the most predictive of a candidate's likely performance in a job. The report also contains percentile scores for each competency assessed, and these should be considered as a guide to help you identify where a candidate has excelled or might need to improve a specific behavioural skill. It is not a score, in isolation, that should drive your final recruitment decision. This is because the competency percentile scores are produced by a subset of the test questions, whereas the overall percentile score is produced from all of the test questions.

### Behavioural Interpretation

For each competency, an interpretation (four bullet points) has been provided to help you better understand the decisions a candidate has made on the assessment. Not every bullet point may apply equally to all candidates, but you should consider them all to be relevant as they are based on the specific choices a candidate has made on the assessment.

### Interview Questions

For each competency, interview questions are provided to help you explore a candidate's results in more detail. You can select the question you believe is most appropriate and you should use the relevant 'four behavioural indicators' to guide your evaluation of a candidate's response. Note, you do not need to ask all four questions - usually one is sufficient, but more are provided if needed. It is also good practice to follow up with additional questions. To help with this you may wish to use the STAR method. This is described below with some additional probing questions you can use.

- **S = Situation:** What was the situation? What were the circumstances or context?
- **T = Task:** What were you trying to achieve? What was your task?
- **A = Actions:** How did you approach it? What did you do? Who did you involve? What challenges did you face, and how did you overcome these? What else did you do?
- **R = Results:** What was the outcome? How did you establish the benefit of what you did?

You should aim to spend more time asking 'Action' questions as these are the ones that typically produce behavioural responses.

### Rating Scale

The Rating Scale below can be used to evaluate a candidate's responses to the competency questions provided in this report. During the interview you should aim to establish a pattern of positive & negative evidence for each competency. The final rating you give should be a 'weighted' decision, based on the collective evidence you obtain for each competency.

1 - Significant Development	2 - Development	3 - Mixed	4 - Strength	5 - Significant Strength
A strong and dominant pattern of negative behaviour (in relation to the indicators)	A clear pattern of negative behaviour (in relation to the indicators), and little evidence of positive behaviour to weigh against this – none significant	Balanced evidence of both positive and negative behaviour (in relation to the indicators)	A clear pattern of positive behaviour (in relation to the indicators), and little evidence of negative behaviour to weigh against this – none significant	A strong and dominant pattern of positive behaviour (in relation to the indicators)
